INTRODUCTION

This report contains a summary presentation in tabular form of the vital events which occurred during the year 1973.

In the interest of easy comparison, the same format of tabular presentation has been continued herein as was initiated in the 1968-1969 summary. Counties (and Cities over 10,000 population) are grouped within the 13 standard districts established by Executive Order on August 6, 1969.

Population data are the official 1973 estimates for the state of Washington.

1973 VITAL STATISTICS NARRATIVE FOR SUMMARY

GENERAL POPULATION:

The Population estimate for Washington for 1973 showed an increase of two tenths of one percent, a resumption of the gradual increase of former years that was broken by the 1972 decline. In their analysis of the components of change affecting the 1973 estimate, the Population and Enrollment Section of the Office of Program Planning and Fiscal Management, charged with the production of the official population estimates for Washington State, show that although the birth rate for 1973 is down from the previous year and the death rate is up slightly from 1972, the natural increase of 18,000 persons is partially offset by a net migration loss of 12,500, leaving a 5,500 person net gain due to natural increase.

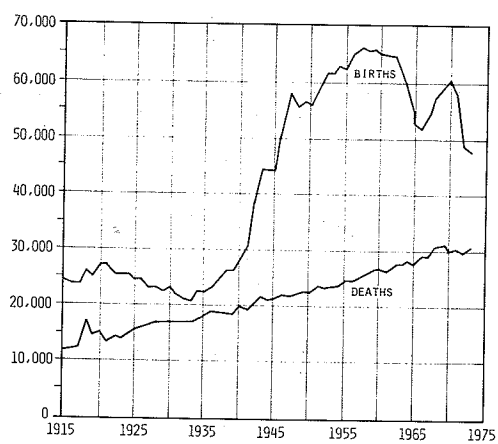

NATALITY

Livebirths in Washington were 614 less this year than in 1972, 47,636 compared to 48,250 last year. This decline in the face of a slightly increased population resulted in a birth rate of 13.9 per 1000 population. The rate for 1972 was 14.1 per 1000. This rate of 13.9 is the lowest for Washington since 1935 when the state population estimate was 1,650,000 compared to 3,424,300 for 1973.

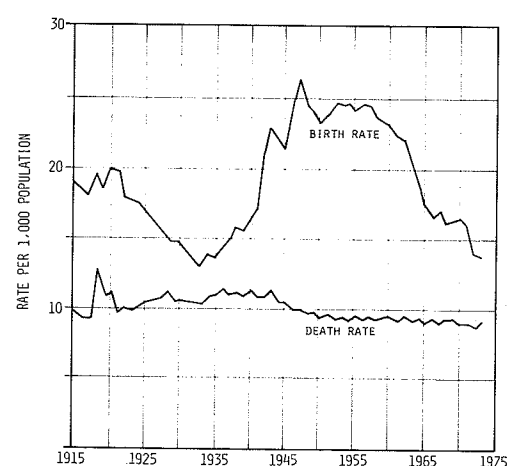

Historically, the birth rate figure has been cyclic in nature, and should that continue it is not unreasonable to expect an at least slight upturn in the near future.

The trend in illegitimate births, downward since the peak in 1970, was reversed this year. The upturn showed 4,321 illegitimacies, an increase of 228 births and 5.6 percent over 1972. While higher than the previous year, 1973's illegitimacies are still 21.9 percent below the peak of 5,533 recorded in 1970.

MORTALITY

There were 1,004 more Washington State residence deaths in 1973 than in the preceding year, bringing the crude death rate to 9.0 per 1000 population from the 1972 rate of 8.7 per 1000. If the birth rate continues to decline, the death rate must increase due to the slow build up of older persons as a component in the total population. If a status of zero population growth were reached, the birth and death rates would be theoretically equal, discounting migration factors.

To investigate the records of mortality for heart disease, cancer, cerebrovascular disease, influenza and pneumonia, arteriosclerosis, and cirrhosis of the liver, the year-to-year fluctuation in the disease-specific death rate per 100,000 population was smoothed out by calculating the straight-line trend for each cause. These trend lines were then graphed on a semi-logarithmic grid so that the relative rates of change could be compared. This graph is presented here.

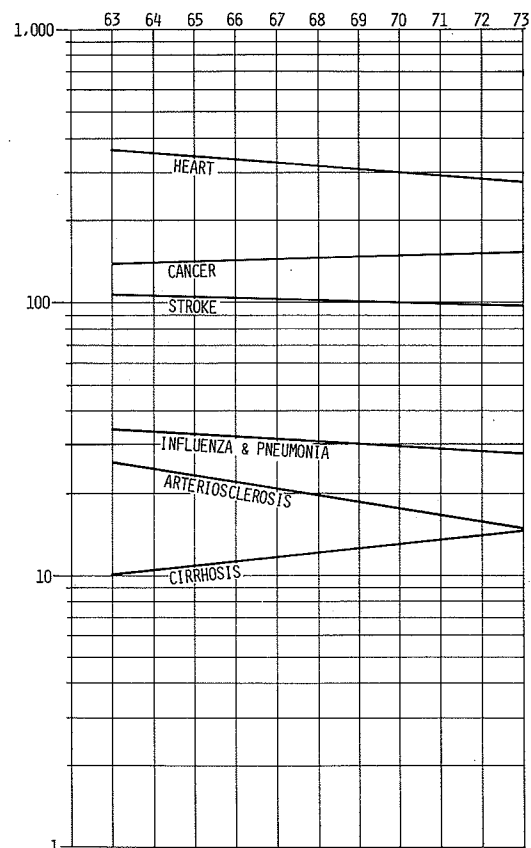

An examination of these mortality trends for the above six of our ten leading causes of death over the last eleven years reveals some interesting facts.

Of the three top causes of mortality, both heart disease and cerebrovascular disease show a slow but significant decline while cancer mortality displays a similar slow but equally significant upward trend. All three of these causes have recorded relatively minor variations from year to year.

The death rates for arteriosclerosis and influenza and pneumonia show considerably more annual variation, with the influenza and pneumonia deaths having a positive correlation to deaths from heart disease. Therefore it is not surprising to find that the trend lines for these latter two causes are nearly parallel. The change for arteriosclerosis death rates shows a sharper decrease than any of the others when interpreted by a trend line.

Cirrhosis of the liver, on the other hand, shows a sharply rising trend over the eleven year period. If these trends continue, cirrhosis will become the fifth leading cause of death in eleven years.

STRAIGHT-LINE TREND OF MORTALITY RATES PER 100,000 POPULATION FOR SELECTED DISEASES
Washington State, 1963-1973

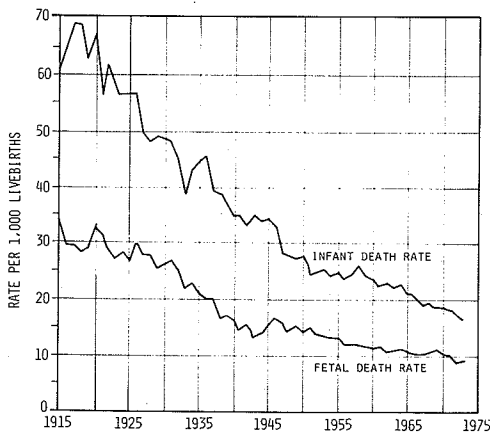

INFANT MORTALITY

The infant death rate continued to decline in Washington in 1973, with the rate being 16.4 deaths per 1000 livebirths compared to 17.0 for 1972.

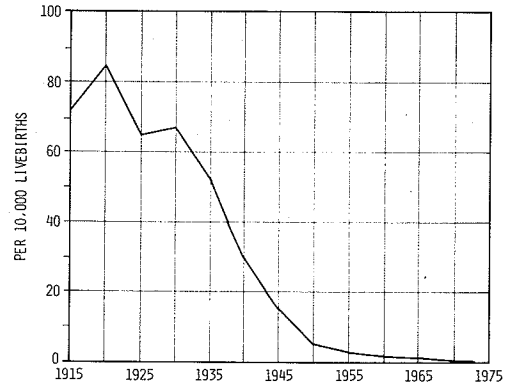

For those to whom the infant mortality data has a special interest, tables of livebirths and infant mortality by race, first prepared as a supplement to the 1967 Vital Statistics Summary, have been extended to include 1973. A second table of infant mortality rates by race and geographic area for 4-year periods has been extended to 1971.

Fetal deaths were up two from last year's 428, but the decline in births brought the rate up from 8.8 per 1000 livebirths in 1972 to 9.0 per 1000 in 1973.

MATERNAL MORTALITY

Three maternal deaths were recorded in Washington during 1973. These deaths reflect a rate of but .6 deaths per 10,000 livebirths, half of 1972's rate of 1.2, and the lowest rate in Washington's history.

Rates per 1,000 livebirths.

MARRIAGE AND DIVORCE

Marriages in 1973 were down slightly-----.6 percent from 1972-----while divorces rose 4.9 percent in the past year. The rise in the divorce rate is quite probably due to Washington's "No Fault" divorce law, although both marriages and divorces seem to follow a continuing trend in the past six years. The ratio of divorces per 1,000 marriages shows a sharp increase, and the ratio is now 516.7 divorces per 1,000 marriages.
